

SF Module Flow Review for PMS

From spares quotation to order dispatch and goods acknowledgement

Purpose

This document captures the proposed SF process for the PMS spares module so the PMS team can review and approve the business flow before development starts. The requested flow replaces the earlier built spares execution flow for this module after review approval.

Scope Of This Flow

- Starts from quotation finalization in the spares module.
- Covers quotation type, customer PO upload, SF creation, MRP, shortage, design BOM, purchase, store receipt, assembly where applicable, dispatch, and customer acknowledgement.
- Applies to domestic and international dispatch, with document requirements captured country wise.
- Keeps Custom Engg cases separate where Changeover or Speed Upgradation is selected.

Mandatory Selection Fields

Field	Allowed Values	Usage
Quotation Type	Consumable, Critical, Cons + Critical, Custom Engg.	Required at quotation stage.
Dispatch Mode	Self Pickup, Courier	Required at quotation stage.
Custom Engg Type	Changeover, Speed Upgradation	Required only when quotation type is Custom Engg.

Process Flow Diagram

The diagram below shows the proposed operational sequence and where conditional Custom Engg handling enters the flow.

SF Module Flow From Quotation to Dispatch

Review draft for PMS team approval before development

Stage Matrix For Review

This matrix converts the flow into PMS implementation checkpoints for review.

No	Stage	Action	Owner	TAT	PMS Requirement
1	Quotation setup	Select quotation type, dispatch mode, and Custom Engg subtype if applicable.	Sales or spares user	Before order conversion	Add mandatory fields and validation.
2	Order ownership	Assign internal order owner and confirm customer PO.	Order owner	Before SF creation	Create order ownership field and PO upload gate.
3	Create SF	Create SF with document requirements country wise and packing and dispatch duration.	Tripti	1 day	SF form must capture domestic or international handling.
4	Run MRP	Run MRP from order dashboard after SF is created.	Jitender	Same day	Add dashboard action and date stamp.
5	Shortage report	Generate shortage report once SF is created.	Jitender	Same day	Link shortage report to SF and MRP result.
6	Design and BOM	Complete design requirement and BOM, mainly for Custom Engg where needed.	Design team	1 week	Track BOM completion and design TAT.
7	Packing and logistics	Calculate packing boxes and arrange logistics.	Planning or logistics	Before dispatch readiness	Capture box count and logistics status.
8	Raise indent	Raise indent to Purchase.	Jitender	Same day	Indent should be generated from approved requirement.
9	Purchase PO	Raise Mechanical PO, BOP PO, Sec 6 PO, and Automation PO.	Purchase department	As per purchase process	Track each PO group separately.
10	Store receipt	Receive items group wise.	Store	3 weeks	Store receipt must update group wise readiness.
11	Assembly for CE	Complete assembly for Custom Engg cases.	Assembly team	3 to 4 days	Conditional stage when Custom Engg is selected.
12	Dispatch	Verify uploaded dispatch documents before dispatch.	Dispatch team	Before release	Document checklist must be mandatory.
13	Acknowledgement	Capture acknowledgement that goods were received.	Customer or PMS user	After delivery	Add goods received acknowledgement upload or confirmation.

Review Points Before Development

- Confirm meaning and responsible person for Order Own.
- Confirm country wise document checklist fields for domestic and international dispatch.
- Confirm whether MRP and shortage report are system generated, manually uploaded, or both.
- Confirm if design TAT applies to all quotation types or only Custom Engg cases.
- Confirm purchase PO groups and whether Sec 6 should be shown as a separate vendor or internal department.
- Confirm acknowledgement format: checkbox, uploaded proof, received date, receiver name, or all of these.
